Tel: 020 8680 2588
Website: www.parksidegrouppractice.co.uk

Date of inspection visit: 16 November 2016
Date of publication: This is auto-populated when the report is published

This report describes our judgement of the quality of care at this service. It is based on a combination of what we found when we inspected, information from our ongoing monitoring of data about services and information given to us from the provider, patients, the public and other organisations.

Overall summary

Letter from the Chief Inspector of General Practice

We carried out an announced comprehensive inspection at Parkside Group Practice on 16 November 2016. Overall the practice is rated as good.

Our key findings across all the areas we inspected were as follows:

- There was an open and transparent approach to safety and an effective system in place for reporting and recording significant events.
- Risks to patients were assessed and well managed.
- Staff assessed patients' needs and delivered care in line with current evidence based guidance. Staff had been trained to provide them with the skills, knowledge and experience to deliver effective care and treatment.
- Patients said they were treated with compassion, dignity and respect and they were involved in their care and decisions about their treatment.

- Information about services and how to complain was available and easy to understand. Improvements were made to the quality of care as a result of complaints and concerns.
- Patients said they found it easy to make an appointment with a named GP and there was continuity of care, with urgent appointments available the same day.
- The practice had good facilities and was well equipped to treat patients and meet their needs.
- There was a clear leadership structure and staff felt supported by management. The practice proactively sought feedback from staff and patients, which it acted on.
- The provider was aware of and complied with the requirements of the duty of candour.

Professor Steve Field (CBE FRCP FFPH FRCGP)
Chief Inspector of General Practice

Summary of findings

The five questions we ask and what we found

We always ask the following five questions of services.

Are services safe?

The practice is rated as good for providing safe services.

- There was an effective system in place for reporting and recording significant events. As well as discussing significant events with staff, they were discussed with people outside the practice so that ideas for improvement could be shared. They were also reported to The National Reporting and Learning System (NRLS).
- Following receipt of national patient safety alerts, the practice contacted patients individually advising them of the risks and to book an appointment and were also sent information leaflets.
- Lessons were shared to make sure action was taken to improve safety in the practice.
- When things went wrong patients received reasonable support, truthful information, and a written apology. They were told about any actions to improve processes to prevent the same thing happening again.
- The practice had clearly defined and embedded systems, processes and practices in place to keep patients safe and safeguarded from abuse.
- Risks to patients were assessed and well managed. Regular fire drills were carried out.

Good

Are services effective?

The practice is rated as good for providing effective services.

- Data from the Quality and Outcomes Framework (QOF) showed patient outcomes were above average compared to the national average.
- Staff assessed needs and delivered care in line with current evidence based guidance.
- Clinical audits demonstrated quality improvement.
- Staff had the skills, knowledge and experience to deliver effective care and treatment.
- There was evidence of appraisals and personal development plans for all staff.
- Staff worked with other health care professionals to understand and meet the range and complexity of patients' needs.

Good

Are services caring?

The practice is rated as good for providing caring services.

Good

Summary of findings

- Data from the national GP patient survey showed patients rated the practice in line with others for several aspects of care.
- Patients said they were treated with compassion, dignity and respect and they were involved in decisions about their care and treatment.
- Information for patients about the services available was easy to understand and accessible.
- We saw staff treated patients with kindness and respect, and maintained patient and information confidentiality.
- There was an established PPG group.

Are services responsive to people's needs?

The practice is rated as good for providing responsive services.

- Practice staff reviewed the needs of its local population and engaged with the NHS England Area Team and Clinical Commissioning Group to secure improvements to services where these were identified.
- Patients said they found it easy to make an appointment with a named GP and there was continuity of care, with urgent appointments available the same day.
- The practice had good facilities and was well equipped to treat patients and meet their needs.
- Information about how to complain was available and easy to understand and evidence showed the practice responded quickly to issues raised. Learning from complaints was shared with staff and other stakeholders.

Good

Are services well-led?

The practice is rated as good for being well-led.

- The practice had a clear vision and strategy to deliver high quality care and promote good outcomes for patients. Staff were clear about the vision and their responsibilities in relation to it.
- There was a clear leadership structure and staff felt supported by management. The practice had a number of policies and procedures to govern activity and held regular governance meetings.
- There was an overarching governance framework which supported the delivery of the strategy and good quality care. This included arrangements to monitor and improve quality and identify risk.

Good

Summary of findings

- The provider was aware of and complied with the requirements of the duty of candour. The partners encouraged a culture of openness and honesty. The practice had systems in place for notifiable safety incidents and ensured this information was shared with staff to ensure appropriate action was taken
- The practice proactively sought feedback from staff and patients, which it acted on. The patient participation group was active.
- There was a strong focus on continuous learning and improvement at all levels.

Summary of findings

The six population groups and what we found

We always inspect the quality of care for these six population groups.

Older people

The practice is rated as good for the care of older people.

- The practice offered proactive, personalised care to meet the needs of the older people in its population.
- The practice was responsive to the needs of older people, and offered home visits and urgent appointments for those with enhanced needs.
- An alert on patient records highlighted elderly patients who were particularly vulnerable.
- All patients aged 75 and over had a named GP.
- Home visits were available for patients who were unable to attend the surgery.

Good

People with long term conditions

The practice is rated as good for the care of people with long-term conditions.

- Nursing staff had lead roles in chronic disease management and patients at risk of hospital admission were identified as a priority.
- There were alerts for long term conditions on patient records.
- At 76%, the percentage of patients with diabetes, on the register, in whom the last IFCC-HbA1c is 64 mmol/mol or less in the preceding 12 months (01/04/2014 to 31/03/2015) was above the CCG and national averages of 72% and 78%.
- Longer appointments and home visits were available when needed.
- All these patients had a named GP and a structured annual review to check their health and medicines needs were being met. For those patients with the most complex needs, the named GP worked with relevant health and care professionals to deliver a multidisciplinary package of care.
- The practice had online appointment booking and prescription requests.
- The practice had a palliative care register which was regularly reviewed at the multi-disciplinary team meetings. All palliative care patients had care plans.

Good

Families, children and young people

The practice is rated as good for the care of families, children and young people.

Good

Summary of findings

- There were systems in place to identify and follow up children living in disadvantaged circumstances and who were at risk, for example, children and young people who had a high number of A&E attendances. Immunisation rates were relatively high for all standard childhood immunisations.
- Patients told us that children and young people were treated in an age-appropriate way and were recognised as individuals, and we saw evidence to confirm this.
- At 83%, the percentage of women aged 25-64 whose notes record that a cervical screening test has been performed in the preceding 5 years (01/04/2014 to 31/03/2015) was above the CCG and national averages of 82%.
- Appointments were available outside of school hours and the premises were suitable for children and babies. Children and babies were prioritised for same day appointments.
- We saw positive examples of joint working with midwives and health visitors.
- A range of family planning services were provided including hormone implants.

Working age people (including those recently retired and students)

The practice is rated as good for the care of working-age people (including those recently retired and students).

- The needs of the working age population, those recently retired and students had been identified and the practice had adjusted the services it offered to ensure these were accessible, flexible and offered continuity of care.
- The practice was proactive in offering online services as well as a full range of health promotion and screening that reflects the needs for this age group.
- Same day appointments were available.
- The practice was open from 7.30am to 7.30pm Monday to Friday to accommodate working people.
- Telephone consultations were available.
- Online appointment booking and prescription requests was available.

Good

People whose circumstances may make them vulnerable

The practice is rated as good for the care of people whose circumstances may make them vulnerable.

Good

Summary of findings

- The practice held a register of patients living in vulnerable circumstances including those with a learning disability. There was also an alert on the patient records where a patient was identified as vulnerable.
- The practice offered longer appointments for patients with a learning disability.
- The practice regularly worked with other health care professionals in the case management of vulnerable patients.
- The practice informed vulnerable patients about how to access various support groups and voluntary organisations.
- Staff knew how to recognise signs of abuse in vulnerable adults and children. Staff were aware of their responsibilities regarding information sharing, documentation of safeguarding concerns and how to contact relevant agencies in normal working hours and out of hours.

People experiencing poor mental health (including people with dementia)

The practice is rated as good for the care of people experiencing poor mental health (including people with dementia).

- 91% of patients with schizophrenia, bipolar affective disorder and other psychoses had a comprehensive, agreed care plan documented in the record, in the preceding 12 months (01/04/2014 to 31/03/2015). This was above the CCG average of 84% and the national average of 88%.
- Patients with severe mental health conditions were offered weekly appointments with a named GP.
- The practice regularly worked with multi-disciplinary teams in the case management of patients experiencing poor mental health, including those with dementia.
- The practice carried out advance care planning for patients with dementia.
- The practice had told patients experiencing poor mental health about how to access various support groups and voluntary organisations.
- The practice had a system in place to follow up patients who had attended accident and emergency where they may have been experiencing poor mental health.
- Staff had a good understanding of how to support patients with mental health needs and dementia.

Good

Summary of findings

What people who use the service say

The national GP patient survey results were published on 6 January 2016. The results showed the practice was performing in line with local and national averages. Two hundred and eighty survey forms were distributed and 126 were returned. This represented a 45% response rate.

- 82% of patients found it easy to get through to this practice by phone compared to the national average of 73%.
- 86% of patients were able to get an appointment to see or speak to someone the last time they tried compared to the national average of 76%.

- 90% of patients described the overall experience of this GP practice as good compared to the national average of 85%.
- 91% of patients said they would recommend this GP practice to someone who has just moved to the local area compared to the national average of 79%.

As part of our inspection we also asked for CQC comment cards to be completed by patients prior to our inspection. We received 35 comment cards which were all positive about the standard of care received. Patients commented on the kind and caring nature of all staff and stated that they were treated with dignity and respect.

Areas for improvement

Parkside Group Practice

Detailed findings

Our inspection team

Our inspection team was led by:

Our inspection team was led by a CQC Lead Inspector and included a GP specialist adviser.

Background to Parkside Group Practice

The practice is based within 27 Wyche Grove, South Croydon, Surrey, CR2 6EX. The practice is situated in a residential area. Car parking was available to the front and rear of the premises. The practice was well served by local buses. Parkside Group Practice is a modern, purpose built building.

The practice staff includes a senior GP partner (male) and four partner GPs (male and female), three salaried GPs (male and female), two locum GPs (female), four practice nurses (female), two healthcare assistants (female), a practice manager and a team of reception/administrative staff. Parkside Group Practice was a training practice.

The practice was open from 7.30am and 7.30pm Monday to Friday. Appointments were from 7.30am to 6.30pm and 6.30pm to 7.30pm daily. In addition to pre-bookable appointments which could be booked up to four weeks in advance, urgent appointments were also available for people that needed them. Outside of these hours, cover was provided by the out of hours GP service which operated from 6.30pm to 8.00am and from 6.30pm on a Friday to 8.00am on a Monday and the NHS 111 service. Information about out of hours services was available in the practice leaflet and was on display in the reception area.

Parkside Group Practice is one of a number of GPs covered by Croydon Clinical Commissioning Group (CCG). It has a practice list of around 13232. The practice's patient population has an above average number of people aged 75 years and over compared to the national average.

In terms of deprivation, Croydon is in the eighth most deprived decile.

The practice provides the following regulated activities from Parkside Group Practice, 27 Wyche Grove, South Croydon, Surrey, CR2 6EX

- Treatment of disease, disorder or injury;
- Surgical procedures;
- Maternity and midwifery services;
- Family planning;

Diagnostic and screening procedures

Why we carried out this inspection

We carried out a comprehensive inspection of this service under Section 60 of the Health and Social Care Act 2008 as part of our regulatory functions. The inspection was planned to check whether the provider is meeting the legal requirements and regulations associated with the Health and Social Care Act 2008, to look at the overall quality of the service, and to provide a rating for the service under the Care Act 2014.

Detailed findings

How we carried out this inspection

Before visiting, we reviewed a range of information we hold about the practice and asked other organisations to share what they knew. We carried out an announced visit on 16 November 2016. During our visit we:

- Spoke with a range of staff including GPs, practice nurses and reception/administrative staff and spoke with patients who used the service.
- Observed how patients were being cared for and talked with carers and/or family members
- Reviewed an anonymised sample of the personal care or treatment records of patients.
- Reviewed comment cards where patients and members of the public shared their views and experiences of the service.

To get to the heart of patients' experiences of care and treatment, we always ask the following five questions:

- Is it safe?
- Is it effective?

- Is it caring?
- Is it responsive to people's needs?
- Is it well-led?

We also looked at how well services were provided for specific groups of people and what good care looked like for them. The population groups are:

- Older people
- People with long-term conditions
- Families, children and young people
- Working age people (including those recently retired and students)
- People whose circumstances may make them vulnerable
- People experiencing poor mental health (including people with dementia)

Please note that when referring to information throughout this report, for example any reference to the Quality and Outcomes Framework data, this relates to the most recent information available to the CQC at that time.

Are services safe?

Our findings

Safe track record and learning

There was an effective system in place for reporting and recording significant events.

- Staff told us they would inform the practice manager of any incidents and there was a recording form available on the practice's computer system. The incident recording form supported the recording of notifiable incidents under the duty of candour. (The duty of candour is a set of specific legal requirements that providers of services must follow when things go wrong with care and treatment).
- We saw evidence that when things went wrong with care and treatment, patients were informed of the incident, received reasonable support, truthful information, a written apology and were told about any actions to improve processes to prevent the same thing happening again.
- The practice carried out a thorough analysis of the significant events.

We reviewed safety records, incident reports, patient safety alerts and minutes of meetings where these were discussed. We saw evidence that lessons were shared and action was taken to improve safety in the practice. As well as discussing significant events with staff, they were discussed with people outside the practice so that ideas for improvement could be shared. For example, two serious incidents were reported to The National Reporting and Learning System (NRLS) as well as the local hospital; the practice had informed all concerned bodies of the incident. In one incident, a GP from the practice noted two incorrect paediatric haematology reference ranges (blood results) for two paediatric patients and contacted the haematology advice line, the local haematology consultant as well as the lead consultant at the issuing hospital who agreed that an error had been made. The incident was reported to NRLS and the GP revised their policies and procedures which the hospital then also adopted leading to a change outside the practice. to prevent further incidents occurring.

National patient safety alerts were disseminated by email and discussed in clinical meetings. We saw the practice had responded to Medicines and Healthcare Products Regulatory Agency (MHRA) alerts to ensure best practice.

The practice shared with us action they took to ensure the safety of patients following the receipt of patient safety alerts. For example, following an alert on updated guidelines on pregnancy outcomes for women taking Sodium Valproate, all female patients taking the medication were written to advising them of the risks and to book an appointment with their consultant neurologist. They were also sent an information leaflet.

Overview of safety systems and processes

The practice had clearly defined and embedded systems, processes and practices in place to keep patients safe and safeguarded from abuse, which included:

- Arrangements were in place to safeguard children and vulnerable adults from abuse. These arrangements reflected relevant legislation and local requirements. Policies were accessible to all staff. The policies clearly outlined who to contact for further guidance if staff had concerns about a patient's welfare. There was a lead member of staff for safeguarding. The GPs attended safeguarding meetings when possible and always provided reports where necessary for other agencies. Staff demonstrated they understood their responsibilities and all had received training on safeguarding children and vulnerable adults relevant to their role. GPs and practice nurses were trained to child protection or child safeguarding level three. All administration staff were trained to level one.
- A notice in the waiting room advised patients that chaperones were available if required. All administration staff who acted as chaperones were trained for the role and had received a Disclosure and Barring Service (DBS) check. (DBS)
- The practice maintained appropriate standards of cleanliness and hygiene. We observed the premises to be clean and tidy. The practice nurse was the infection control clinical lead who liaised with the local infection prevention teams to keep up to date with best practice. There was an infection control protocol in place and staff had received up to date training. Annual infection control audits were undertaken; the last one was in October 2016. We saw evidence that action was taken to address the improvements identified, for example the taps had been changed to ensure they were fixed to the wall.

Are services safe?

- The arrangements for managing medicines, including emergency medicines and vaccines, in the practice kept patients safe (including obtaining, prescribing, recording, handling, storing, security and disposal). Processes were in place for handling repeat prescriptions which included the review of high risk medicines. Prescription pads were kept in a locked cupboard in reception, –pad numbers were logged in on receipt and out when taken by GP or nurse. The practice manager checked uncollected prescriptions weekly. Prescriptions which were older than one week were returned to the GP to follow up with the patient.
- The practice carried out regular medicines audits, with the support of the local CCG pharmacy teams, to ensure prescribing was in line with best practice guidelines for safe prescribing. Patient Group Directions had been adopted by the practice to allow nurses to administer medicines in line with legislation. PGDs provide a legal framework that allows registered health professionals to supply and/or administer a specified medicine(s) to a pre defined group of patients, without them having to see a GP. The Health Care Assistants was trained to administer vaccines and medicines against a patient specific prescription or direction (PSD) from a prescriber. PSDs are written instructions from a qualified and registered prescriber for a medicine including the dose, route and frequency or appliance to be supplied or administered to a named patient after the prescriber has assessed the patient on an individual basis.
- We reviewed six personnel files and found appropriate recruitment checks had been undertaken prior to employment. For example, proof of identification, references, qualifications, registration with the appropriate professional body and the appropriate checks through the Disclosure and Barring Service.

Monitoring risks to patients

Risks to patients were assessed and well managed.

- There were procedures in place for monitoring and managing risks to patient and staff safety. There was a health and safety policy available with a poster in the staff kitchen which identified local health and safety representatives. A health and safety review was completed by the practice in April 2016 and a practice review meeting was held to discuss the findings. The practice had up to date fire risk assessments and carried

out regular fire drills. All electrical equipment was checked to ensure the equipment was safe to use and clinical equipment was checked to ensure it was working properly. A portable appliance test was completed in July 2016. Equipment was also checked and calibrated in May 2016. The practice had a variety of other risk assessments in place to monitor safety of the premises such as control of substances hazardous to health and infection control and legionella, last completed in July 2016 (Legionella is a term for a particular bacterium which can contaminate water systems in buildings).

- Arrangements were in place for planning and monitoring the number of staff and mix of staff needed to meet patients' needs. There was a rota system in place for all the different staffing groups to ensure enough staff were on duty. Two locum GP were currently being used to cover maternity leave

Arrangements to deal with emergencies and major incidents

The practice had adequate arrangements in place to respond to emergencies and major incidents.

- There was an instant messaging system on the computers in all the consultation and treatment rooms which alerted staff to any emergency.
- All staff received annual basic life support training and there were emergency medicines available in the treatment room.
- The practice had a defibrillator available on the premises and oxygen with adult and children's masks. A first aid kit and accident book were available.
- Emergency medicines were easily accessible to staff in a secure area of the practice and all staff knew of their location. All the medicines we checked were in date and stored securely.
- The practice had a comprehensive business continuity plan in place for major incidents such as power failure or building damage. The plan included emergency contact numbers for staff. Copies were available on the practice's computer system and in the employee handbook.

Are services effective?

(for example, treatment is effective)

Our findings

Effective needs assessment

The practice assessed needs and delivered care in line with relevant and current evidence based guidance and standards, including National Institute for Health and Care Excellence (NICE) best practice guidelines.

- The practice had systems in place to keep all clinical staff up to date. Staff had access to guidelines from NICE and used this information to deliver care and treatment that met patients' needs.
- The practice monitored that these guidelines were followed through risk assessments, audits and random sample checks of patient records.
- Clinical staff attended monthly protected time initiatives funded by the Clinical Commissioning Group (CCG). They also attended quarterly locality meetings which were attended by other local practices. Clinical guidelines and protocols were discussed at both of these meetings. All clinicians fed back summaries of learning from all events they attended at practice meetings.

Management, monitoring and improving outcomes for people

The practice used the information collected for the Quality and Outcomes Framework (QOF) and performance against national screening programmes to monitor outcomes for patients. (QOF is a system intended to improve the quality of general practice and reward good practice). The most recent published results were 99% of the total number of points available with exception reporting at 8.9%. (Exception reporting is the removal of patients from QOF calculations where, for example, the patients are unable to attend a review meeting or certain medicines cannot be prescribed because of side effects).

This practice was not an outlier for any QOF (or other national) clinical targets. Data from 1 April 2014 to 31 March 2015 showed:

- Performance for diabetes related indicators was similar to the national average. For example the percentage of

patients on the diabetes register, with a record of a foot examination and risk classification within the preceding 12 months was 92% against the national average of 87%.

- The percentage of patients with diabetes on the register who had had an influenza immunisation in the preceding 1 August to 31 March was 96% against the national average of 94%.
- Performance for mental health related indicators was similar to the national average. For example, the percentage of patients with schizophrenia, bipolar affective disorder and other psychoses who have a comprehensive, agreed care plan documented in the record, in the preceding 12 months was 91% against the national average of 88%.

There was evidence of quality improvement including clinical audit.

- There had been a rolling programme of clinical audits and we saw two completed in the last two years, where the improvements made were implemented and monitored.
- The practice participated in local audits, national benchmarking, accreditation, peer review and research.
- Findings were used by the practice to improve services. For example, recent action was taken as a result of an audit on improving diagnosis for osteoporosis QOF register prevalence. During the first cycle in April 2016 the practice had identified seven patients, however during the second cycle in November 2016, the number of patients had increased to 28. This was the result of better screening, an osteoporosis template being designed to include codes for fragility fractures and completing the template for all patients with a new diagnosis of osteoporosis.

Information about patients' outcomes was used to make improvements. For example, all new mothers were sent a congratulations leaflet also encouraging them to register their baby at the practice and informing them of their eight week post-natal check. This meant more new mothers and their babies could be monitored and supported at the practice rather than at external services.

Effective staffing

Are services effective?

(for example, treatment is effective)

Staff had the skills, knowledge and experience to deliver effective care and treatment.

- The practice had an induction programme for all newly appointed staff. This covered such topics as safeguarding, infection prevention and control, fire safety, health and safety and confidentiality.
- The practice could demonstrate how they ensured role-specific training and updating for relevant staff. For example, the GPs lead in their specialists areas which included joint injections, vasectomy, cardiovascular diseases, minor surgery, diabetes and sexual health. One of the GPs was trained to undertake vasectomies
- Parkside Group Practice was an active training practice and took three trainee GPs. The practice offered outstanding training, which included an Alumni Group, which provided a forum for GPs and trainees who had trained or worked at the practice to meet informally three times a year, which allowed the group and its members to keep in touch as well as sharing ideas and participate in learning from one another.
- All nurses also attended regular update training in cervical screening and immunisation. All clinical staff were encouraged to attend local monthly protected education events where they received education and updates from the Clinical Commissioning Group (CCG).
- Staff administering vaccines and taking samples for the cervical screening programme had received specific training which had included an assessment of competence. Staff who administered vaccines could demonstrate how they stayed up to date with changes to the immunisation programmes, for example by access to on line resources and discussion at practice meetings.
- The learning needs of staff were identified through a system of appraisals, meetings and reviews of practice development needs. Staff had access to appropriate training to meet their learning needs and to cover the scope of their work. This included ongoing support, one-to-one meetings, coaching and mentoring, clinical supervision and facilitation and support for revalidating GPs. All staff had received an appraisal within the last 12 months.
- Staff received training that included: safeguarding, fire safety awareness, basic life support and information governance. Staff had access to and made use of e-learning training modules and in-house training.

Coordinating patient care and information sharing

The information needed to plan and deliver care and treatment was available to relevant staff in a timely and accessible way through the practice's patient record system and their intranet system.

- This included care and risk assessments, care plans, medical records and investigation and test results.
- The practice shared relevant information with other services in a timely way, for example when referring patients to other services.
- Staff worked together and with other health and social care professionals to understand and meet the range and complexity of patients' needs and to assess and plan ongoing care and treatment. This included when patients moved between services, including when they were referred, or after they were discharged from hospital. For example where a vulnerable patient was to be discharged from hospital, the practice notified the community matron who visited the patient in hospital and arranged a home care package in the community before discharge.

Multi-disciplinary team (MDT) meetings took place on a monthly basis where care plans were routinely reviewed and updated for patients with complex needs. Information with Health visitors and the Integrated Care Team (ICT) was shared on a daily basis.

The practice kept a list of all patients who were at risk of unplanned admissions to hospital. A risk assessment was carried out monthly to identify any new patients to add to the list. These patients were discussed at the monthly MDT meetings. All discharges and A&E attendances were reviewed to identify any necessary changes to be made to their care plans. Once the practice became aware of an A&E attendance or discharge, any patients who were on the list were contacted by telephone or seen in person by a GP and/or the community matron.

Palliative care meetings took place on a monthly basis which involved coordinating and recording information about palliative care patients to improve communication across health teams.

Consent to care and treatment

Staff sought patients' consent to care and treatment in line with legislation and guidance.

Are services effective?

(for example, treatment is effective)

- Staff understood the relevant consent and decision-making requirements of legislation and guidance, including the Mental Capacity Act 2005. When providing care and treatment for children and young people, staff carried out assessments of capacity to consent in line with relevant guidance.
- Where a patient's mental capacity to consent to care or treatment was unclear the GP or practice nurse assessed the patient's capacity and, recorded the outcome of the assessment.
- The process for seeking consent was monitored through patient records audits.

Supporting patients to live healthier lives

The practice identified patients who may be in need of extra support. For example:

- Patients receiving end of life care, carers, those at risk of developing a long-term condition and those requiring advice on their diet, smoking and alcohol cessation and substance misuse. Patients were seen in specialist clinics run by the practice itself or were signposted to the relevant local service.
- Patients identified as requiring extra support were flagged on the computer system and prioritised for appointments.

The practice's uptake for the cervical screening programme was 83%, which was above the CCG and national average

of 82%. There was a policy to offer telephone reminders for patients who did not attend for their cervical screening test. The practice demonstrated how they encouraged uptake of the screening programme by using information in different languages and for those with a learning disability and they ensured a female sample taker was available. The practice also encouraged its patients to attend national screening programmes for bowel and breast cancer screening. There were failsafe systems in place to ensure results were received for all samples sent for the cervical screening programme and the practice followed up women who were referred as a result of abnormal results.

Childhood immunisation rates for the vaccinations given were comparable to CCG/national averages. For example, childhood immunisation rates for the vaccinations given to under two year olds ranged from 93% to 97% and five year olds from 90% to 93%.

Patients had access to appropriate health assessments and checks. These included health checks for new patients and NHS health checks for patients aged 40–74. The practice manager kept lists of patients with conditions such as learning disabilities, mental health and long term conditions. This included the dates reviews were due and whether a referral had been made if the patient had failed to attend their review. Appropriate follow-ups for the outcomes of health assessments and checks were made, where abnormalities or risk factors were identified.

Are services caring?

Our findings

Kindness, dignity, respect and compassion

We observed members of staff were courteous and very helpful to patients and treated them with dignity and respect.

- Curtains were provided in consulting rooms to maintain patients' privacy and dignity during examinations, investigations and treatments.
- We noted that consultation and treatment room doors were closed during consultations; conversations taking place in these rooms could not be overheard.
- Reception staff knew when patients wanted to discuss sensitive issues or appeared distressed they could offer them a private room to discuss their needs.

All of the 35 patient Care Quality Commission comment cards we received were positive about the service experienced. Patients said they felt the practice offered an excellent service and staff were helpful, caring and treated them with dignity and respect.

There was a PPG group consisting of 12 members which had been established five years ago. The group met on a quarterly basis and patient feedback and complaints were discussed at the meetings. There was also a virtual PPG which had 77 members. In July 2016, 38 of those members completed an online survey regarding patient access and the results were in the process of being collated. As a result of a suggestion made by the PPG in July 2016, a PPG notice board was now displayed in reception. There was also a Parkside Group Practice newsletter, which informed patients of new and leaving staff and of any healthcare matters. Copies of the newsletters we placed in reception for patients to take away with them. We spoke with two members of the patient participation group (PPG). They also told us they were satisfied with the care provided by the practice and said their dignity and privacy was respected. Comment cards highlighted that staff responded compassionately when they needed help and provided support when required.

Results from the national GP patient survey showed patients felt they were treated with compassion, dignity and respect. The practice's achievement was above the CCG and national averages for its satisfaction scores on consultations with GPs and nurses. For example:

- 94% of patients said the GP was good at listening to them compared to the clinical commissioning group (CCG) average of 87% and the national average of 88%.
- 89% of patients said the GP gave them enough time compared to the CCG average of 83% and the national average of 86%.
- 97% of patients said they had confidence and trust in the last GP they saw compared to the CCG average of 94% and the national average of 95%.
- 88% of patients said the last GP they spoke to was good at treating them with care and concern compared to the national average of 85%.
- 94% of patients said the last nurse they spoke to was good at treating them with care and concern compared to the national average of 90%.
- 94% of patients said they found the receptionists at the practice helpful compared to the CCG average of 86% and the national average of 86%.

Care planning and involvement in decisions about care and treatment

Patients told us they felt involved in decision making about the care and treatment they received. They also told us they felt listened to and supported by staff and had sufficient time during consultations to make an informed decision about the choice of treatment available to them. Patient feedback from the comment cards we received was also positive and aligned with these views. We also saw that care plans were personalised.

Results from the national GP patient survey showed patients responded positively to questions about their involvement in planning and making decisions about their care and treatment. Results were above local and national averages. For example:

- 92% of patients said the last GP they saw was good at explaining tests and treatments compared to the CCG average of 84% and the national average of 86%.
- 87% of patients said the last GP they saw was good at involving them in decisions about their care compared to the national average of 82%.
- 97% of patients said the last nurse they saw was good at involving them in decisions about their care compared to the national average of 89%.

Are services caring?

The practice provided facilities to help patients be involved in decisions about their care:

- Staff told us that translation services were available for patients who did not have English as a first language. We saw notices in the reception areas informing patients this service was available.
- Information leaflets were available in easy read format.

Patient and carer support to cope emotionally with care and treatment

Patient information leaflets and notices were available in the patient waiting area which told patients how to access a number of support groups and organisations. Information about support groups was also available on the practice website.

The practice's computer system alerted GPs if a patient was also a carer. The practice had identified 172 patients as carers which was 1% of the practice list. A poster on display in the waiting area advised patients to identify themselves to the practice if they were carers. Patients who were carers were flagged on the practice's computer system and prioritised for appointments where necessary. Written information was available to direct carers to the various avenues of support available to them.

Staff told us that if families had suffered bereavement, their usual GP contacted them or sent them a sympathy card. This call was either followed by a patient consultation at a flexible time and location to meet the family's needs and/or by giving them advice on how to find a support service.

Are services responsive to people's needs?

(for example, to feedback?)

Our findings

Responding to and meeting people's needs

The practice reviewed the needs of its local population and engaged with the NHS England Area Team and Clinical Commissioning Group (CCG) to secure improvements to services where these were identified. For example, having recognised the need to increase the flu uptake, the practice invited patients 65 years and over to their seasonal flu clinics and were able to receive their vaccination opportunistically when attending for other appointments. All GPs at the practice provided all areas of family planning and sexual health. The practice had three GPs with a special interest in this area, one of whom was a family planning trainer. The practice offered all forms of contraception including contraceptive implants and IUCD fitting and removal.

- The practice offered evening appointments until 7.30pm Monday to Friday for working patients who could not attend during normal opening hours.
- There were longer appointments available for patients with a learning disability.
- Home visits were available for older patients and patients who had clinical needs which resulted in difficulty attending the practice.
- Same day appointments were available for children and those patients with medical problems that require same day consultation.
- Patients were able to receive travel vaccinations available on the NHS as well as those only available privately.
- There were disabled facilities, a hearing loop and translation services available.
- The practice had an arrangement with the local chemist to deliver medication to housebound patients.

Access to the service

The practice was open from 7.30am and 7.30pm Monday to Friday. Appointments were from 7.30am to 6.30pm and 6.30pm to 7.30pm daily. In addition to pre-bookable appointments that could be booked up to four weeks in advance, urgent appointments were also available for people that needed them. We will edit the report to reflect this. Information about out of hours services was available in the practice leaflet and was on display in the reception area.

Results from the national GP patient survey showed that patient's satisfaction with how they could access care and treatment was above to local and national averages.

- 85% of patients were satisfied with the practice's opening hours compared to the national average of 79%.
- 82% of patients said they could get through easily to the practice by phone compared to the national average of 73%.

People told us on the day of the inspection that they were able to get appointments when they needed them.

The practice had a system in place to assess:

- whether a home visit was clinically necessary; and
- the urgency of the need for medical attention.

Patients who required a home visit were advised to contact the practice before 10am. The GP would then contact the patient or carer in advance to gather information to allow for an informed decision to be made on prioritisation according to clinical need. In cases where the urgency of need was so great that it would be inappropriate for the patient to wait for a GP home visit, alternative emergency care arrangements were made. The practice advised that children should be brought in to the practice as they would be prioritised for appointments rather than waiting for a home visit. Clinical and non-clinical staff were aware of their responsibilities when managing requests for home visits.

Listening and learning from concerns and complaints

The practice had an effective system in place for handling complaints and concerns.

- Its complaints policy and procedures were in line with recognised guidance and contractual obligations for GPs in England.
- The practice manager was the designated responsible person who handled all complaints in the practice.
- We saw that information was available to help patients understand the complaints system. For example, information was available in the practice leaflet which was on display and given to new patients. A comments and complaints box was in reception.

We looked at four complaints received in the last 12 months and found these were satisfactorily handled, dealt

Are services responsive to people's needs? (for example, to feedback?)

with in a timely way and with openness and transparency. Lessons were learnt from individual concerns and complaints and also from analysis of trends and action was taken as a result to improve the quality of care. For example, in response to a complaint concerning a

complaint regarding repeat prescriptions, the patient was written to with an apology and a description of the action that would be taken. The complaint was discussed at a practice and PPG meetings and the need for tact when discussing sensitive issues with patients was highlighted.

Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

Our findings

Vision and strategy

The practice had a clear vision to deliver high quality care and promote good outcomes for patients.

- The practice had a mission statement, which was that they were committed to offering all patients a confidential service in a safe environment. Staff knew and understood the practice's values.
- The practice had a robust strategy and supporting business plans which reflected the vision and values and were regularly monitored.

Governance arrangements

The practice had an overarching governance framework which supported the delivery of the strategy and good quality care. This outlined the structures and procedures in place and ensured that:

- There was a clear staffing structure and staff were aware of their own roles and responsibilities.
- Practice specific policies were implemented and were available to all staff.
- A comprehensive understanding of the performance of the practice was maintained.
- A programme of continuous clinical and internal audit was used to monitor quality and to make improvements and we saw a rolling programme.
- There were robust arrangements for identifying, recording and managing risks, issues and implementing mitigating actions.

Leadership and culture

On the day of inspection the partners in the practice demonstrated they had the experience, capacity and capability to run the practice and ensure high quality care. They told us they prioritised safe, high quality and compassionate care. Staff told us the partners were approachable and always took the time to listen to all members of staff.

The provider was aware of and had systems in place to ensure compliance with the requirements of the duty of candour. (The duty of candour is a set of specific legal requirements that providers of services must follow when things go wrong with care and treatment). This included support training for all staff on communicating with

patients about notifiable safety incidents. The partners encouraged a culture of openness and honesty. The practice had systems in place to ensure that when things went wrong with care and treatment:

- The practice gave affected people reasonable support, truthful information and a verbal and written apology.
- The practice kept written records of verbal interactions as well as written correspondence.

There was a clear leadership structure in place and staff felt supported by management.

- Staff told us the practice held regular team meetings.
- Staff told us there was an open culture within the practice and they had the opportunity to raise any issues at team meetings and felt confident and supported in doing so.
- Staff said they felt respected, valued and supported, particularly by the GPs in the practice. All staff were involved in discussions about how to run and develop the practice, and the partners encouraged all members of staff to identify opportunities to improve the service delivered by the practice.
- Staff were encouraged to develop in their careers and were well supported by the practice management to do so. We noted that two of the GP trainees who had qualified had returned to the practice to work as locum GPs and were encouraged by the practice to gain experience and further develop their careers.

Seeking and acting on feedback from patients, the public and staff

The practice encouraged and valued feedback from patients, the public and staff. It proactively sought patients' feedback and engaged patients in the delivery of the service.

- The practice had gathered feedback from patients through the patient participation group (PPG) and through surveys and complaints received. The PPG met regularly, carried out patient surveys and submitted proposals for improvements to the practice management team. For example, as a result of a suggestion made by the PPG in July 2016 a PPG notice board was displayed in reception area.
- The practice had gathered feedback from staff through staff away days and generally through staff meetings, appraisals and discussion. Staff told us they would not

Are services well-led?

Good 

(for example, are they well-managed and do senior leaders listen, learn and take appropriate action)

hesitate to give feedback and discuss any concerns or issues with colleagues and management. Staff told us they felt involved and engaged to improve how the practice was run.

There was a focus on continuous learning and improvement at all levels within the practice. The practice team was forward thinking and part of local pilot schemes to improve outcomes for patients in the area.

Continuous improvement
